

Stay at the forefront OF FEED TECHNOLOGY

Alheit du Toit, Feedtek

Since 2001, Feedtek Animal Feed Solutions, a proudly South African company, provides professional solutions to all users of animal feed – from primary producers to regional feed millers and commercial feedlots.

Our unique, specialised products are backed by personal technical support services to fulfil the specific needs of customers, enabling them to stay at the forefront of feed technology and still be profitable, despite the cost squeeze in which the industry operates.

The Feedtek product range for home-mixing of feeds, is super concentrated and contains no carriers or natural protein and almost no moisture. This ensures low inclusion levels and maximum use of locally produced feed ingredients, limiting total feed cost. These specialist animal feed concentrates are manufactured by a specialist premix manufacturer according to very strict quality assurance standards, including FAMI-QS, a European quality standard. The composition of each bag can therefore be guaranteed at all times. The range includes specialist animal feed concentrates for all farm animals, including small stock, beef cattle, dairy, pigs, poultry and game.

Customers are supported by a personal and complete professional technical support service. From a humble beginning of five animal scientists and three sales representatives 21 years ago, the Feedtek team have since grown to 15 registered professional animal scientists and a total of 25 representatives located across Southern Africa, making it one of the strongest technical teams in the South African feed industry today. ●

Visit us at the NAMPO Harvest Day (stand 39, Nutri Hall) to learn more and meet our dedicated, professional team.

Mix your own high-quality animal feeds with specialist feed concentrates.

FEEDTEK
